INT.CL. : H01L 23/12 H01L 21/60

TITLE : HIGH-FREQUENCY SEMICONDUCTOR
DEVICE USING INTERPOSER

ABSTRACT : PROBLEM TO BE SOLVED: To provide a small thin light package which can be constituted readily.

SOLUTION: In a semiconductor device, in which a semiconductor package, is constituted of a mold resin and an interposer to which a semiconductor chip is bonded and in which the semiconductor chip is connected to a signal line patterned on the interposer by wire bonding, there are provided a transmission line having a line to be a ground potential, disposed on both sides of the signal line and a via hole for bringing the top and bottom surfaces of the interposer into conduction.
